DUNGS®
Combustion Controls

Just the right mix!

Technical Description

Integrated gas-air system with high power density based on DUNGS zero pressure multiple actuator GB-ND 055/057 D01 to EN 126 or MBC to EN 161 for modulating or multi-stage mode:

- Pneumatic integrated system comprising zero pressure mode and integrated signal gain possible
- Inlet pressure
 - GB-WND 055/057: $p_{\max}$ 65 mbar (6.5 kPa)
 - MBC-WND: $p_{\max}$ 100 mbar (10 kPa)
- Modulation range up to 1:10
- Breaks up flow pattern and reduces resonances
- Offset correction of gas/air ratio at servo regulator

- Limits maximum flow by a low hysteresis flow restrictor, injector requires no replacement for different gas families
- Implemented by adapting system components and optimising to specific application and design requirements.

Application

For pre-mix burners and forced-draft burners.

Suitable for gases to EN 437 and other gaseous inert media.

WhirlWind Family from 1.5 kW up to 1,200 kW

Swirlplate - The heart of the WhirlWind system

Integrated Venturi 2. Signal amplifier

Swirlplate

- + Patented
- + Two stage cascaded signal amplification
- + Breaks up uniform flow pattern and reduces resonances

Spiral swirl plate 1. Signal amplifier

Silencer pocket

MPA 51 system

MPA 51

Microprocessor controlled automatic burner control for intermittent operation to control and monitor pneumatic modulating gas blower burners.

By a PWM signal the rotation speed of a direct current blower can be controlled.

Heater regulators can be attached to the output controller entrance or to the integrated eBus interface.

The operating and display unit shows the working condition of the burner control and allows the adjustment and inquiry of service and user parameters.

The MPA vision software MV 2000 enables the setting and the diagnose of the MPA via PC or Laptop.

MPA 10xx system

MPA 101x & MPA 109x

Microprocessor-controlled multiple burner control unit for the ignition and monitoring of force-draught or non-force-draught gas burners.

The units have been tested for intermittent operation according to EN 298.

Depending on the requirements, versions with several start-up attempts, automatic recycling, internal or external ignition are available.

Flame monitoring takes place by the ionisation principle.

MPA 109x models can be mounted directly to the DUNGS multiple actuator units GB 055 and GB 057.
