Technical description

The GW...A4 pressure switch is an adjustable pressure switch as per EN 1854 (GW 6000 A4 as per DIN 3398T3) for burners.

It is suitable for closing, opening or switching over a current circuit when the actual pressure value deviates from the specified pressure setpoint. The specified pressure setpoint (operating point) is set at a setting wheel using a scale.

Application

Pressure monitoring in burner control systems

Suitable for gases of gas families 1,2,3 and other neutral gaseous media, as well as air, flue gases and combustion products.

GW 500 A4: Free of non-ferrous metals, suitable for gases up to max. 0.1 % by vol. H₂S, dry.

Approvals

EU type test approval as per EC Gas Appliance Directive:

GW...A4 CE-0085 AO 3220

EU type test approval as per EC Pressure Equipment Directive:

GW...A4 CE0036

Approvals in other important gas-consuming countries.

Functional

Pressure switch for applications involving excess pressure.

GW 500 A4

The pressure switch acts via a rubber diaphragm against the force of the setting spring on the micro-switch.

Pressure switch GW...A4

The switching mechanism reacts to overpressure and closes, opens or switches over a current circuit when the specified pressure setpoint is overshoot or undershot.

Switching function

As pressure rises:

1 NC opens, 2 NO closes.

As pressure falls:

1 NC closes, 2 NO opens.

Definition of switching difference Δp

The switching difference Δp is the pressure difference between the upper and lower switching pressures.

Installation position

Standard installation position; if a different installation position is used, pay attention to the changed operating points:
GW 500 A4 ca. ± 5 mbar

When installed horizontally, the pressure switch switches at a pressure higher

When installed horizontally overhead, the pressure switch switches at a pressure lower

When installed at an intermediate position, the pressure switch responds if there is maximum upper or lower pressure deviation w.r.t. the set pressure reference value.
